How are emails sent from your domains?

About our Workshops

Altitude 365 | We have developed a variety of workshops, all of which aim to support your digitalization journey in an inspiring and efficient way.

If you do not find what you are looking for, you can always contact us for a customized experience!

Increase the credibility of your email domains!

Our e-mail security workshop focusing on SPF, DKIM and DMARC is addressed to those who want to secure and protect domains against spoofing. The reason for implementing this is to increase credibility on the domains that you use to email your external customers and suppliers.

During this workshop, we discuss the concepts of SPF, DKIM, and DMARC, and why you should have this and how to implement it.

Suitable receiver

This workshop is addressed to IT operations and security department.

What do you get?

The purpose is to gain insight into how your domains are used today and what services are used to send mail to external parties. After completion of the workshop, a lot of materials and tools are provided to facilitate the journey towards securing your domains, such as:

- Documentation about how SPF, DKIM and DMARC work and how it is set up in your environment.
- Documentation of guidelines for how new services and domains should be set up to comply with the SPF, DKIM and DMARC framework.
- Power BI Report "DMARC" to get daily status updates for your domains.

Time & place

The workshop takes place at your location or over Skype/Teams and is held during two days. During Day 1 we will review what SPF, DKIM and DMARC are and put it in a monitoring mode. Day 2 of this workshop takes place 1-2 months later, as we review the Power BI report to see what insights it gives us. We also draw up an action plan for how to proceed.
