OMS True hybrid data center

About our Workshops

Altitude 365 | We have developed a variety of workshops, all of which aim to support your digitalization journey in an inspiring and efficient way.

If you do not find what you are looking for, you can always contact us for a customized experience!

How do you create the true hyprid benefits with Azure?

What is Azure? It can be described as Microsoft's state-of-the-art data center in the cloud. No matter where you are - if you are traveling to the cloud or if you have chosen to invest in a separate data center - this package is suitable.

How do we test a disaster scenario? Is a secondary data center an excessive investment? Do you trust that a backup is protection enough? Why are disasters happening and how can you protect yourself from them? During a four-day workshop we will review several different products that will give you true hybrid benefits with Azure containing:

- Identification - Together we identify your need within backup/DR, logging, automation and security.
- Integration - We create an understanding of how the products belong together and how to maximize the value of packaging from design to visualization.
- Guidance - For further custom configuration, hybrid connection of your data center and Altitude plus menu.

Suitable receiver

This workshop is addressed to IT executives and IT professionals.

What do you get?

The purpose is to establish all OMS parts in order for them to be used immediately after the completion of the workshop. You get a clear understanding of how to use the services to facilitate and automate processes, reduce costs and secure your IT.

After completion of the workshop you have received: A thorough understanding of all OMS products, a basic set-up of OMS service to build on, a hybrid-based data center and a future plan on how to proceed.

Time & place

Total time is four days, of which the workshop itself is three days and takes place at your location and one day is set for meetings, documentation and follow-up/reporting on Skype/Teams. Day 1 Proactive Monitoring, Day 2 Automation and Day 3 Continuity Planning. The workshop requires preset lab environment.
